

# ABA Therapy at The Center for Children's Therapy

## Mission

**The Center for Children's Therapy (CCT)** provides a wide range of pediatric therapeutic services that include Physical, Occupational, Speech, and ABA Therapy.

The mission of CCT is to prepare children for successful engagement in life by achieving new skills, surmounting challenges, and gaining more independence.

CCT provides 1:1 individualized services by certified professionals. Each child receives a comprehensive evaluation, which may include parent and child interviews, clinical observations, standardized assessments, and a written summary of recommendations that guides program planning. Each program is individualized and tailored to your child's needs.

## What is ABA Therapy?

**Applied Behavior Analysis (ABA) Therapy** is a behavioral therapy for children with Autism that uses scientifically-based techniques to reduce challenging behaviors, and teach a variety of skills such as academic, social, functional, and communication skills.

Several ABA methods are incorporated into each program including Naturalistic Instruction, Discrete Trial Training, and Behavior Modification. Positive Reinforcement is used during each session to motivate your child.

Each 1:1 session is performed by a Board Certified Behavior Analyst (BCBA), certified by the BACB.

## For more information about The Center for Children's Therapy, please contact:
